| 11 | Mrs. Soly Zachariah  | Faculty Specialization  |    |
| 12 | Mrs. Ramya S. Kumar  | Faculty Specialization  |    |
| 13 | Mrs. Sujata Shahabade  | Faculty Specialization  |    |
| 14 | Mrs. Sreevidya T.V.  | Faculty Specialization  |  |
| 15 | Mr. Omkar Sherkhane  | Faculty Specialization  |  |
| 16 | Mr. Abhijeet Salvi   | Faculty Specialization  |  |

## **Introduction to Bachelor of Computer Applications**

Bachelor of Computer Application is a three years undergraduate programme that has been designed meticulously to meet the requirements of dynamic I.T. industry. This programme aims at fostering concepts of Information technology and business technology in students and equip them with the required technical, logical, problem solving and soft skills, which prepare them for the corporate world. It also focuses on inculcating effective communication skills which a software professional must have.

No education is complete without incorporating social and moral values. This programme takes care of this aspect as well. The core courses of the program are supplemented by electives so that students can tailor the program according to their interest. State of art computer laboratories, in the campus, help students to practically implement the concepts learned. Qualified and experienced faculty members guide students in their project work. As we all know degrees in Computer Application lead to rewarding and lucrative careers, excellent placement and incubation assistance is provided.

## Program Outcomes

| <b>SR NO</b> | <b>PO TITLE</b>                                     | <b>POS IN BRIEF</b>  |
|--------------|---|--|
| <b>PO1</b>   | <b>Core Knowledge</b>                               | Develop a strong foundation in the core principles and theories of their chosen field of study to pursue a profession of choice by understanding fundamental concepts, methodologies, and key terminologies  |
| <b>PO2</b>   | <b>Research Skills</b>                              | Trigger the research aptitude by developing basic research skills, including the ability to conduct literature reviews, design experiments, collect and analyze data, and draw meaningful conclusions.   |
| <b>PO3</b>   | <b>Communication Skills</b>                         | Communicate scientific concepts, experimental results and analytical arguments clearly and concisely, both verbally and in writing and also ability to present their work through written, oral, and visual presentations, including an original research proposal in a clear and understandable manner to both technical and non-technical audiences. |
| <b>PO4</b>   | <b>Ethical and Professional Behavior</b>            | Understand and adhere to ethical standards by recognizing the importance of integrity, honesty and ethical responsibility in scientific research and professional practice.  |
| <b>PO5</b>   | <b>Teamwork and Collaboration</b>                   | Ability to work cohesively to achieve common goals, solve problems and contribute to the success of a project or task paving way to individual and collective growth.  |
| <b>PO6</b>   | <b>Adaptability and Lifelong Learning</b>           | Engage themselves in lifelong learning to keep up with the pace of changing technology and interdisciplinary approach to provide better solutions and new ideas for the sustainable developments   |
| <b>PO7</b>   | <b>Technical Skills</b>                             | Acquisition of specialized technical skills and expertise relevant to the specific field of study i.e advanced laboratory techniques, computational skills, or other specialized methodologies.  |
| <b>PO8</b>   | <b>Critical Thinking and problem-Solving Skills</b> | Graduates would be equipped with the ability to analyze information critically, think logically, and solve complex problems. Applying scientific methods, mathematical reasoning, and logical approaches to real-world situations  |

### **Program Specific Outcomes**

| Sr No       | PSOs in brief   |
|-------------|---|
| <b>PSO1</b> | Understand the fundamentals and applications of programming, Data Structures, Databases, Networking, Internet of Things, Mobile Computing, Information security and Data Analytics. |
| <b>PSO2</b> | Effectively integrate I.T. based solution in the users domain after properly analyzing the requirements and the constraints.  |
| <b>PSO3</b> | Unique Knowledge of Technology in Business Applications and Computational tools for simulation.   |
| <b>PSO4</b> | Ability to comprehend and write effective project reports in a multidisciplinary environment in the context of changing technologies.   |

## Course Structure

|----------------------|----------------------------|
| BOS                  | Computer Science           |
| Class                | S. Y. B.C.A                |
| Semester             | III                        |
| Subject Name         | Database Management System |
| Subject Code         | PUSCA301                   |
| Level of the Subject | Basic                      |

### Course Objectives:

1. Introduction of the concept of the DBMS with respect to the relational model,
2. Specify the functional and data requirements for a typical database application and to understand creation, manipulation and querying of data in databases.

| Unit No. | Name of Unit                                       | Topic No. | Content   | Hours |
|----------|--|-----------|---|-------|
| 1        | Introduction to DBMS and Data Models               | 1.1       | Introduction to DBMS : Data, Database, Application of DBMS ,DBMS – Definition, Overview of DBMS, Advantages of DBMS, Levels of abstraction/ Data independence,  | 10L   |
|          |  | 1.2       | DBMS Architecture, Client/Server Architecture, Three –Tier architecture<br>Data models - ( relational, hierarchical, network Object Oriented ).   |       |
|          |  | 1.3       | Entity Relationship Model – ER diagram Entities and types, attributes and types, entity sets, relations and Notations, relationship sets, aggregation / generalization.                                 |       |
| 2        | Introduction to Database Languages and Constraints | 2.1       | DDL Statements :Creating Databases, Using Databases, data types, Creating Tables Altering Tables(alter with add columns, alter to drop columns), Renaming Tables, Dropping Tables.                      | 10L   |
|          |  | 2.2       | DML Statements : insert, select, update, delete, unique records, conditional select, Clauses-where, aggregate functions (count, min, max, avg, sum), group by clause, having clause, order by, distinct |       |
|          |  | 2.3       | Relational Constraints - primary key, referential integrity(foreign key), unique constraint, Not Null constraint, Check constraint, default constraint.   |       |
| 3        | Normalization and Join Operation                   | 3.1       | Schema refinement and Normal forms(Normalization):Functional  | 10L   |

|                              |   |     |   |            |
|------------------------------|---|-----|---|------------|
|                              |   |     | dependencies(Anomalies), first, second, third, and BCNF normal forms based on primary keys.   |            |
|                              |   | 3.2 | Relational Algebra and Join : fetching operations (selection, projection) Joining Tables –equi join(With ansi, non ansi, using clause), natural joins, inner join, outer join (left outer, right outer, full outer), not equi join, cross join.                             |            |
|                              |   | 3.3 | Database Protection: Security Issues, Threats to Databases, Security Mechanisms, Role of DBA  |            |
| 4                            | Subqueries, View and Database Functions | 4.1 | Functions – String Functions (concat, instr, left, right, mid, length, lcase/lower, ucase/upper, replace, trim, ltrim, rtrim), Math Functions (abs, ceil, floor, mod, pow, sqrt, round, truncate) Date Functions (adddate, datediff, day, month, year, hour, min, sec, now) | 10L        |
|                              |   | 4.2 | Subqueries – subqueries with IN, NOT IN, Nested query, query to find second highest salary, third highest salary.   |            |
|                              |   | 4.3 | Views - Introduction to View, storing complex queries, creating, altering dropping the view, Create view through Join and Subquery Operation.   |            |
| <b>Total No. of Lectures</b> |   |     |   | <b>40L</b> |

### Course Outcomes:

1. Describe the basic concept of DBMS and the DBMS Architecture.
2. Develop the skills of Database Languages with DDL And DML Commands.
3. Identify how to make use of Constraints to limit/restrict data.
4. Apply the Normalization concept while designing the database.
5. Choose various Join Operations according to situations.
6. Design and create databases using Subqueries and View.

## CASE STUDY

|   |  |
|---|--|
| 1 | Design E-R-Data Model Based on following case study. Company has Employees, departments, and projects . Company is organized into departments , Department controls a number of projects, Number of employees working with multiple projects, Employee: store each employee's name, Contact number, address, salary, sex (gender), and birth date , Keep track of each employee belongs to department also note the relationship amongst each relation also predict the attributes of each entity.                 |
| 2 | Assume you have been asked to design the database structure for a job site. What NORMALIZED table data model / table design would you recommended for storing the personal data of the candidates like name , address, and phone number and their skill in multiple languages so as to ensure that when a company searches based on a particular set of skills, the query is quick to return the result. Note that each candidate would have multiple Skills.(Hint : You will need to have 3 tables in the design) |

### Course Objectives:

1. To Understand data structures and different techniques to manage data.
2. Introduce the concept of data structures through ADT including List, Stack, Queues and develop applications using data structure algorithms.

| Unit No. | Name of Unit                               | Topic No. | Name of Topic  | Hours |
|----------|--|-----------|--|-------|
| 1        | Abstract data types and Algorithm Analysis | 1.1       | <b>Abstract Data Types and Arrays:</b> Introduction, The Date Abstract Data Type, Bags, Iterators, Application. Array Structure, Python List, Two Dimensional Arrays, Matrix Abstract Data Type, Application | 10    |
|          |  | 1.2       | <b>Sets and Maps:</b> Sets-Set ADT, Selecting Data Structure, List based Implementation, Maps-Map ADT, List Based Implementation, Multi-Dimensional Arrays-Multi-Array ADT, Implementing Multi Arrays .      |       |
|          |  | 1.3       | <b>Algorithm Analysis:</b> Complexity Analysis-Big-O Notation, Evaluating Python Code,Evaluating Python List, Application  |       |
| 2        | Linked structure and sorting               | 2.1       | <b>Searching and Sorting:</b> Searching-Linear Search, Binary Search, Sorting-Bubble, Selection and Insertion Sort, Working with Sorted Lists-Maintaining Sorted List  | 10    |
|          |  | 2.2       | <b>Linked Structures:</b> Introduction, Singly Linked List-Traversing, Searching,  |       |

|                              |                         |     |   |           |
|------------------------------|-------------------------|-----|---|-----------|
|                              |                         |     | Prepending and Removing Nodes, Bag ADT-Linked List Implementation. Linked List Iterators, Applications-Polynomials.   |           |
|                              |                         | 2.3 | <b>Advanced Linked List:</b> Doubly Linked Lists-Organization and Operation,Circular Linked List-Organization and Operation   |           |
| 3                            | Stack and Queue         | 3.1 | <b>Stacks and Queue:</b> Stack ADT, Implementing Stacks-Using Python List, Using Linked List, Stack Applications-Balanced Delimiters, Evaluating Postfix Expressions  | 10        |
|                              |                         | 3.2 | <b>Recursion:</b> Recursive Functions, Properties of Recursion, Its working, Recursive Applications.  |           |
|                              |                         | 3.3 | <b>Hash Table and Collision:</b> Introduction, Hashing-Linear Probing, Clustering, Rehashing, Separate Chaining, Hash Functions, Collision.   |           |
| 4                            | Tree and Graph and Heap | 4.1 | <b>Binary Trees:</b> Tree Structure, Binary Tree-Properties, Implementation and Traversals ,Expression Trees, Binary Search Tree, Operations on Binary Search Tree  | 10        |
|                              |                         | 4.2 | <b>Heaps:</b> Heaps, types and Heap Sort.   |           |
|                              |                         | 4.3 | <b>Graph:</b> Introduction, Graph, Graph Terminology, Memory Representation of Graph, Adjacency Matrix Representation of Graph, Adjacency List or Linked Representation of Graph, Graph Traversal, Shortest Path problem using Dijkstra's algorithm, Applications of the Graph. |           |
| <b>Total No. of Lectures</b> |                         |     |   | <b>40</b> |

### Course Outcomes:

1. Use the primitive data types and abstract data types using Python programming language.
2. Apply the basic concepts of Data structure using Python
3. Analyze complexity of data using algorithms
4. Understanding the concept of stack, link list,queue
5. Evaluate different techniques to search and sort data.
6. Create Tree and Graph and Heap techniques to store data properly in memory.

| CASE STUDY |   |
|------------|---|
| 1          | In an inventory management system, we can utilize abstract data types such as bags to represent different categories of items. Each category can be implemented as a bag ADT, allowing efficient storage and retrieval of items. For example, a bag can represent the category of electronics, another for clothing, and so on. Iterators can be employed to traverse through these bags, facilitating operations like adding new items, removing items, and updating quantities. To manage the inventory efficiently, we can implement a linked list to store the details of each item within a category. Each node of the linked list can hold information such as item name, quantity, price, etc. Using recursion, we can perform operations like searching for a specific item, updating its quantity, or removing it from the inventory. For instance, when a customer purchases an item, a recursive function can be employed to update the quantity of the item in the inventory recursively across all categories if needed, ensuring accurate stock management.     |
| 2          | In a social network analysis tool, sets can be employed to represent connections between users. Each user can have a set containing their friends or followers. Maps can be used to store additional information about each user, such as their profile details, interests, etc. For instance, a map can associate each user ID with a profile containing their name, age, location, etc. Multi-dimensional arrays can be utilized to store metrics such as the number of likes, comments, or shares each user's posts receive. Hash tables can be utilized for efficient storage and retrieval of user profiles and their corresponding data. Collision handling techniques such as separate chaining can ensure that each user's data is stored correctly and can be accessed quickly. Graphs can be employed to analyze the network structure, identifying communities, influential users, or potential connections. Algorithms like Dijkstra's algorithm can be applied to find the shortest path between users, facilitating efficient communication within the network. |

### **Course Outcomes:**

- 1: Understand the purpose and importance of accounting standards in ensuring consistency and transparency in financial reporting.
- 2: Compare and contrast IFRS with other accounting standards, assess its impact on global financial reporting.
- 3: Explain how accounting processes are facilitated and enhanced through computerized systems, including software applications.
- 4: Use knowledge of accounting principles to record various types of transactions accurately.
- 5: Analyze transaction data, prepare a trial balance, and identify errors in accounting records..
- 6: Apply higher-order thinking skills to prepare final accounts accurately, incorporating necessary adjustments and interpreting financial information effectively.

|----------------------|--------------------------------|
| BOS                  | Computer Science               |
| Class                | S.Y. B.C.A                     |
| Semester             | III                            |
| Subject Name         | Business Accounting Practicals |
| Subject Code         | PUSCA308P                      |
| Level of the Subject | Basic                          |

| Practical No | Details  | Hours |
|--------------|--|-------|
| 1            | Create a new company in Tally and set up its chart of accounts according to standard accounting principles.  | 2     |
| 2            | Enter and post journal entries for the following transactions: purchase of inventory on credit, sale of goods for cash, and payment of rent.                       | 2     |
| 3            | Record a cash receipt transaction and allocate it to appropriate ledger accounts in Tally.   | 2     |
| 4            | Generate a trial balance for the company you created in Tally and ensure that it balances.   | 2     |
| 5            | Use Tally to prepare a sales invoice for a hypothetical sale transaction, including details such as item description, quantity, rate, and taxes.                   | 2     |
| 6            | Enter and process a payment voucher for various expenses incurred by the company, ensuring accurate allocation to respective expense ledger accounts.              | 2     |
| 7            | Perform inventory management tasks in Tally, such as creating stock items, recording stock movements (e.g., purchases, sales, returns), and checking stock levels. | 2     |

|                              |  |           |
|------------------------------|--|-----------|
| <b>8</b>                     | Set up GST (Goods and Services Tax) in Tally for the company and record transactions including GST implications.                       | <b>2</b>  |
| <b>9</b>                     | Generate financial reports such as a profit and loss statement and a balance sheet using Tally for the company's fiscal period.        | <b>2</b>  |
| <b>10</b>                    | Reconcile bank transactions in Tally by matching the company's bank statement with the ledger entries and resolving any discrepancies. | <b>2</b>  |
| <b>Total No. of Lectures</b> |  | <b>20</b> |

|                      |                                 |
|----------------------|---------------------------------|
| BOS                  | Computer Science                |
| Class                | S.Y.B.C.A                       |
| Semester             | III                             |
| Course Name          | Data Visualization using Python |
| Course Code          | PUDSE304D                       |
| Level of the Subject | Medium                          |
| Credit points        | 3                               |

### Course Objectives:

1. To expose students to visual representation methods and techniques that increase the understanding of complex data
2. To introduce students to Python packages that will allow them to create easy to read and understand graphs, charts and other visual representations of data using Python.

| Unit No. | Name of Unit   | Topic No. | Content  | Hours |
|----------|--|-----------|--|-------|
| 1        | Introduction to Data Visualization and Python libraries for Data Visualization | 1.1       | Introduction: Data Visualization and Its Importance, Need of Data Visualization in Businesses, Future of Data Visualization, Use of Data Visualization in Business Decision Making                   | 10    |
|          |  | 1.2       | Data Visualization Techniques: Loading libraries, Popular libraries for data visualization in python, introduction to plots in python, Types of Data required for plot, Installing python libraries. |       |
|          |  | 1.3       | Defining plot types : bar, line and stacked charts, Drawing a simple sine and cosine plot, Defining axis lengths and limits, Defining plot line styles, properties and format strings                |       |
| 2        | Drawing Plots & Customizing them   | 2.1       | Customizing plots: Setting ticks, labels, and grids, Adding a legend and annotations, Moving spines to the center, Setting the   | 10    |

|                              |  |     |   |    |
|------------------------------|--|-----|---|----|
|                              |  |     | transparency and size of axis labels.   |    |
|                              |  | 2.2 | Making bar charts with error bars, Making pie charts count, Plotting with filled areas, Drawing scatter plots with colored markers                                  |    |
|                              |  | 2.3 | Advanced Customization : Adding a shadow to the chart line, Adding a data table to the figure, Using subplots, Customizing grids, Creating contour plots, Timelines |    |
| 3                            | Matplotlib , Seaborn Plotting and Plotly Plotting.                             | 3.1 | Matplotlib: Line Plot, Bar Plot, Scatter plot, Histogram plot, Stack Plot, Pie chart  | 10 |
|                              |  | 3.2 | Seaborn Plotting: Strip plot, Box Plot, Swarm plot, Joint plot, relational plot, HeatMap, Violin Plot, Facet_grid   |    |
|                              |  | 3.3 | Plotly Plotting: Gnatt Chart , Waterfall Chart , Funnel Chart   |    |
| 4                            | Making 3D Visualizations and Animations., Plotting Charts with Images and Maps | 4.1 | 3D Visualization and Animations: Creating 3D bars, Creating 3D histograms, Animating in matplotlib  | 10 |
|                              |  | 4.2 | Plotting with images and maps: Plotting Data on a map using Basemap, Plotting data on a map using Google Map API, Generating Captchas                               |    |
|                              |  | 4.3 | Animation with Plotly : Bubble Chart, Bar Charts, Adding Control Buttons to Animations, Race Bar Chart  |    |
| <b>Total No. of Lectures</b> |  |     |   | 40 |

### Course Outcomes:

1. Explain the need of Data Visualization and the use of Python
2. Describe plotting of data using graphs and charts

3. Create 3D Visualizations , animations and generate Captchas
4. Analyze data and use appropriate graphs and charts
5. Apply different customization techniques to the graphs to make data more meaningful
6. Compare different plotting techniques

| <b>CASE STUDY</b> |  |
|-------------------|--|
| 1)                | <p>2013-2018, the Sales of the company were too good in terms of quantity, profit, and unit sales. But after five years slowly the sales drastically decreased due to the involvement of competitors in the market. The company has 4 branches North, South, east, and Center. The Sales manager wants to analyze the Sales data of the company so that he can find the reasons for the loss.</p> <p>Consider the following columns for the dataset.</p> <p>Order id, Cust_id, Cust_name, Order_date, Month, Year, City, Region, product, category, unit_price, quantity, discount, total price, profit_loss</p> |
| 2)                | <p>ABC college of Arts,Science and commerce was established in 1978 by Dehradun Education Society. It is ideally located in the heart of Uttarakhand G. A. Marg is served by a number of BEST bus routes. As the first degree college , it was started with the aim to cater higher education needs of students in neighboring areas. The college is affiliated to the University of Uttarakhand. We are blessed with dedicated, experienced and well qualified teachers. The below give chart shows salaries data set. Answer the following questions given below:</p>  |

|          |  | <b>Total Lectures</b> |   | <b>40</b> |

**Course Outcomes:**

1. Understand the principles and theories of interaction design.
2. Analyze user needs and behaviors to inform design decisions.
3. Apply user-centered design methodologies in the creation of interactive experiences.
4. Develop proficiency in prototyping tools and techniques.
5. Conduct usability testing to evaluate and refine design solutions.
6. Gain practical experience in designing interfaces for web and mobile applications.

|                              |  | 4.3 | Using the connect() higher-order function to connect components.<br>Utilizing Redux Hooks for state management.<br>Implementing middleware and persistence in Redux. |           |
| <b>TOTAL NO. OF LECTURES</b> |  |     |  | <b>40</b> |

### **Course Outcomes:**

1. Gain a solid understanding of React.js and its core concepts, including virtual DOM, component-based architecture, and JSX syntax.
2. Develop the ability to create reusable and modular components in React.js, allowing for efficient and scalable front-end development.
3. Effectively manage state and props in React.js components, enabling dynamic rendering and interaction within applications.
4. How to bind event handlers, handle form submissions, and update component state based on user interactions.
5. React Router, a popular routing library for React.js, and demonstrates how to implement client-side routing in a React application.
6. To apply the concepts learned throughout the course and build real-world React.js applications.

|---|--|
| <p>1 Case study 1 :</p> <p>Traveldock is the biggest Polish marketplace that connects individual adventure trip organizers with their customers. They offer a wide range of activities, from trekking, biking and sailing in Poland to exploring Chernobyl or diving in Sri Lanka.</p> <p><b>Challenge:</b></p> <p>Travel Ducks goal was to consolidate the market of boutique trips offered by individual providers on a very fragmented market. The end goal was to create an easy-to-use marketplace where tour organizers can showcase and sell their adventure trips.</p> <p style="margin-left: 40px;">1. Create different Components as per requirements.<br/>2. Create a React FORM for taking adventure trips details.<br/>3. Create routes for different types activates</p>  |  |
| <p>2 SnowShow is the most prominent Polish winter tour provider, and also one of the biggest in Europe. They target the Alps in terms of destination and students and grads as their audience. Their uniqueness lies in the combination of sport (skiing and snowboarding) with music. SnowShow organizes over 60 trips yearly. The biggest one, called "Music Fest", attracts over 2000 adventurous people and the biggest music stars.</p> <p><b>Challenge:</b></p> <p>We started our journey with SnowShow in the fall of 2015. Their system already existed and was developed by a freelancer. SnowShow needed a more robust solution with a trustworthy and scalable team. The booking system we took over was complex and included multiple implicit business logic. Making it simple, readable and self-descriptive was the main business and technical challenge for us at the beginning of the project.</p> <p>Create different Components as per requirements.<br/>Create a React FORM for taking Books details<br/>Create routes for different types of Tour</p> |  |

### Course Outcomes:

1. Understanding of the fundamental concepts of Enterprise Resource Planning, including its purpose, benefits, and components.
2. Implementation of methodologies and phases
3. Understand Overview of various modules Functionalities and interdependencies in an ERP system
4. Understanding Tools and techniques for customization and configuration
5. learn how to troubleshoot common issues, Security issues and challenges encountered during ERP implementations
6. Applying Business related tools and ERP Middleware technologies for integration to get better insight in business

## CASE STUDY

|   |  |
|---|--|
| 1 | <p>XYZ Enterprises is a mid-sized manufacturing company specializing in the production of automotive components. With multiple departments and manufacturing facilities, the company faced challenges in managing its operations efficiently. The lack of integration between various business processes, including manufacturing, inventory management, sales, and accounting, resulted in inefficiencies and data silos.</p> <p><b>Challenges:</b></p> <ol style="list-style-type: none"><li>1. Disparate Systems: XYZ Enterprises used multiple standalone systems for different business functions, leading to data duplication and inconsistency.</li><li>2. Lack of Real-time Visibility: Due to the disjointed systems, the company lacked real-time visibility into its operations, making it difficult to make informed decisions.</li><li>3. Manual Processes: Many processes, such as inventory management, procurement, and order processing, were largely manual, leading to errors and delays.</li><li>4. Scalability: The existing systems were not scalable enough to support the company's growth plans and increasing transaction volumes.</li></ol>   |
| 2 | <p>The client is a prominent name in the fabrication industry having expertise in heavy industry fabrication, lifting equipment, and industrial doors in the European region. They specialize in warehouse loading and unloading docks along with the metal Fabrication equipment needed by the various industries. Their manufacturing process begins after a job site visit and obtaining all the necessary measurements from the client. However, they were facing communication issues due to their manual process of managing data in Excel sheets and in hard copies of paper. There was a lack of availability of production status across various departments, and obtaining data from each department was a manual process. This led to miscommunication and uninformed decision-making. Sometimes, different departments were not informed about new quotations or lacked information related to resources. To address these challenges, we implemented an ERP solution that automated the process of receiving quotations, project management, field services management, and product warranty module integration. Upon implementation of cloud-based ERP system helped them get real-time data on a single dashboard and ensured that all departments working more efficiently.</p> <p><b>Challenges Faced By Metal Fabrication Industry</b></p> <ul style="list-style-type: none"><li>• The organization was facing challenges in processing quotations as per demand due to the distributed work among departments and a manual process. There was lack of communication between departments resulting in delays in sending the final quotation to clients.</li><li>• The progress status of projects is not readily available and requires manual updates from each department. This process is time-consuming and delays the overall progress of</li></ul> |

work.

- Field data, including various measurements required for metal fabrication industries including manufacturing lifting equipment, and industrial doors, are collected in hard copy and distributed among departments, which consumes a significant amount of time.
- The warranty for products cannot be determined instantly due to the manual process, and all documents need to be checked to figure out the warranty.
- The organization was lacking proper planning as there is no real-time update from each department, resulting in delays and inefficiencies.
- The manual workflow for quotation preparation is taking up a lot of time, and the inflow of requirements is high compared to the monthly basis on which clients use to prepare quotations. As a result, the organization is unable to meet the monthly demand for the project inflow.

Implicit Objects, Scope And El Expressions: Implicit Objects, Character Quoting Conventions, Unified Expression Language [UnifiedEl], Expression Language   |           |
| <b>Total No.of Lectures</b> |                   |     |   | <b>40</b> |

### Course Outcomes:

1. Understand the basics of Java Foundation Classes (JFC) and Swing.
2. Implement simple GUI applications using Swing components and understand event handling.
3. Demonstrate the process of creating and running threads in Java, both by extending the Thread class and implementing the Runnable interface.

4. Learn about JDBC architecture, different driver types, connectivity models, and the essential `java.sql` package.
5. Implement Session Tracking and CRUD Operations using Servlets.
6. Collaborate between servlets using RequestDispatcher and sendRedirect.

## CASE STUDY

### Study: Swing Components in Java

Swing is a powerful framework for creating window-based applications. Unlike AWT (Abstract Window Toolkit), Swing provides platform-independent and lightweight components. Let's delve into a scenario where a software development team is building a graphical user interface (GUI) application using Swing components.

*Scenario:* The team is developing a music player application. They need to design a sleek and intuitive interface that allows users to browse their music library, create playlists, and control playback. How can the Swing components come to the rescue!

#### JButton (Play/Pause Button):

- The team decides to use a JButton for the play/pause functionality.
- They customize the button's appearance, such as setting an icon for “play” and “pause.”

#### JComboBox (Genre Selection):

- To filter music by genre, the team employs a JComboBox.
- Users can select genres like “Rock,” “Pop,” or “Jazz.”

## **Creating a Student Database Management System**

In this case study, we'll create a web-based application using Java Servlets and JDBC. Our goal is to store student information efficiently. Here are the steps we'll follow:

### **System Setup:**

- We'll use a PostgreSQL database to store student details.
- Create a table named `studentdetails` with columns:
  - `stuid`: Student ID
  - `stuname`: Student Name
  - `email`: Email ID
  - `phonenum`: Phone Number
- Insert some sample data into the table.

### Course Objectives:

1. To implement basic data management functions using SQL.
2. To learn advanced database systems concepts for implementation and usage.

| Unit No. | Name of Unit                                    | Topic No. | Name of Topic   | Hours |
|----------|---|-----------|---|-------|
| 1        | Introduction to PL/SQL and Composite Data Types | 1.1       | <b>PL/SQL:</b> Overview of PL/SQL and its significance in Oracle databases, Basic syntax and structure of PL/SQL blocks, Data Types in PL/SQL – Variable Declaration and initialization | 10L   |
|          |   | 1.2       | <b>Composite Data Types:</b> PL/SQL Records, The %ROWTYPE Attribute, Insert and Update with PL/SQL Records  |       |
|          |   | 1.3       | <b>Control Structures:</b> Conditional Structures, Iterative Control Structures, Sequential Control Structures  |       |
| 2        | Stored Procedures and Functions                 | 2.1       | <b>Stored Procedures:</b> Understand Procedure, Creating a Procedure, Executing a procedure, Deleting Procedure, Parameters-IN,OUT,IN OUT,  | 10L   |
|          |   | 2.2       | <b>Functions:</b> Creating a function, Calling a Function, PL/SQL Recursive Functions Parameters-IN,OUT,IN OUT  |       |
|          |   | 2.3       | <b>SQL Transaction Control Statements:</b> Defining a Transaction, Committing a Transaction, Rolling Back Transactions, Savepoints, Commands  |       |

|                              |                                |     |   |           |
|------------------------------|--------------------------------|-----|---|-----------|
|                              |                                | 3.1 | <b>Cursors:</b> Concept of a cursor, types of cursors: implicit cursors; explicit cursor, Cursor for loops, Cursor variables, Parameterized cursors   |           |
| 3                            | Cursors and Exception Handling | 3.2 | <b>Exception Handling :</b> Understand Exceptions, Handle Exceptions with PL/SQL, Trap Predefined Oracle Server Errors,Trap User-Defined Exceptions, Propagate Exceptions   | 10L       |
|                              |                                | 3.3 | <b>Triggers:</b> Triggers, Uses of Triggers, Parameters, Levels of Triggers   |           |
|                              |                                |     |   |           |
| 4                            | Packages and MongoDB           | 4.1 | <b>Packages:</b> Advantages of Packages, Components of a Package, Develop a Package, enable visibility of a Package's Components, Create the Package Specification and Body, Invoke the Package Constructs, Overloading Subprograms in PL/SQL | 10L       |
|                              |                                | 4.2 | <b>Overview of MongoDB:</b> A MongoDB Document document-oriented data model, MongoDB Query API and its Uses   |           |
|                              |                                | 4.3 | <b>Basic Operations on MongoDB:</b> Create Database, Create collection,Insert Documents in Database, Find Documents in Database, Update Database,Delete Database  |           |
| <b>Total No. of Lectures</b> |                                |     |   | <b>40</b> |

### Course Outcomes:

- 1: Understanding PL/SQL Fundamentals, Data Types, Composite Data Types
- 2: Implement the Control Structures, Procedures, Functions .
- 3: Describe the use of transactions and cursors in PL/SQL
- 4: Examine how to handle Exceptions by making use of Advanced SQL
- 5: Interpret the role of Packages and Triggers in PL/SQL
- 6: Demonstrate basic operations in MongoDB through practical exercises.

| 1                 | <p>Opti Mart Supermarkets Database Improvement:Opti Mart Supermarkets is a popular retail chain with stores all over the country. They're facing some big problems with their database – it's just not keeping up with all the stuff they need to do! Their database stores lots of important information, like what's in stock, who's buying what, how sales are doing, and how they're working with suppliers.The bosses at Opti Mart are worried because these problems are slowing everything down. It's making it harder for them to keep customers happy. So, they've decided it's time to fix things up and make their database work better.</p> <p>As a database expert, you've been asked to come up with a plan to make Opti Mart's database awesome.</p> |
| 2                 | <p>Student Course Registration System:ABC University is implementing a new Student Course Registration System to streamline the process of enrolling students in courses each semester. The system needs to handle tasks such as student registration, course enrollment, generating class schedules, and maintaining student records.</p> <p>As a database specialist, you have been tasked with designing and implementing the database for this system. Your goal is to create a database that efficiently manages student information, course offerings, and enrollment data while ensuring data integrity and security.</p>  |

|-------------------|---|
| 1)                | The provided data set appears to represent measurements of sepal and petal dimensions for various iris flowers, with the corresponding species labeled. Each row in the dataset represents a single observation or sample. Here's a summary of the dataset:<br><br>1.sepal_length: Length of the sepals in the iris flower.<br>2.sepal_width: Width of the sepals in the iris flower.<br>3.petal_length: Length of the petals in the iris flower.<br>4.petal_width: Width of the petals in the iris flower. |

|    | 5.species: The species of the iris flower.   |             |              |             |              |             |         |     |      |     |     |     |        |   |        |     |     |     |        |     |     |     |       |     |        |   |         |     |     |     |        |     |     |     |     |     |        |   |     |     |     |     |        |   |     |     |     |     |        |   |     |     |     |     |        |    |     |     |     |     |        |

| Practical No | Details  | Hours |
|--------------|--|-------|
| 1            | Write a NumPy program to swap rows and columns of a given array in reverse order.  | 2     |
| 2            | A. Write a NumPy program to sort an given array by the nth column.<br>B. Write a NumPy program to partition a given array in a specified position and move all the smaller elements values to the left of the partition, and the remaining values to the right, in arbitrary order (based on random choice).<br>C. Write a NumPy program to count the number of dimensions, number of elements and number of bytes for each element in a given array.<br>D. Write a NumPy program to get a copy of a matrix with the elements below the k-th diagonal zeroed | 2     |
| 3.           | A. Write a Pandas program to split the following dataframe by Unique_column and get mean, min, and max value of age for respective dataset.<br>B. Write a Pandas program to split a given data frame into groups with multiple aggregations.   | 2     |
| 4.           | Perform various data transformation techniques on numerical and date time data.  | 2     |
| 5.           | Perform Univariate , Bivariate and Multivariate graphical and non graphical analysis on Sample Superstore dataset.   | 2     |

|                              |   |    |
|------------------------------|---|----|
| 6.                           | Practical to implement Data Manipulation using Pandas Techniques.(Handling of missing value , Renaming a column, Data Extraction, Categorical encoding) | 2  |
| 7.                           | Setup Github Account, loading data from different source files formats (csv, excel) and summarizing data with statistics.                               | 2  |
| 8.                           | Perform the Data Recommendation technique of some random data.  | 2  |
| 9.                           | Create a dataframe using PySpark and perform basic operations.  | 2  |
| 10.                          | Practical to implement case study on Analyzing Unstructured Data using Text Mining.   | 2  |

| Level of the Subject | Basic            |

**Course Objectives:**

1. To understand the Designing Platform for User Interface and User Experience .
2. To understand user needs and make it more effective using visual design processes, Wireframes & Prototyping

| Unit No. | Name of Unit  | Topic No. | Content   | Hours |
|----------|---|-----------|---|-------|
| 1        | Introduction to UI/UX   | 1.1       | Introduction to what is interaction, Human Computer Interaction (HCI).<br>What is UX and UX design, UX Design versus UI Design, Importance of UX, UX design process, Full stack design, Understanding what is full stack designer<br>And its objectives.              | 10L   |
|          |   | 1.2       | UX Design Process, Discovery and planning, UX strategy,<br>UX research: The discover stage, The explore stage, The test stage, UX analysis and Design   |       |
| 2        | Overview of UI User Behaviour, Persona & Design Behaviour                 | 2.1       | User Behaviour Basics and User Research, The Gestalt theory : The Proximity law, The Similarity law, The Closure law, The Figure-Ground law, The Common Region law  | 10L   |
|          |   | 2.2       | User Personas, Understanding the user personas, Four different perspectives on personas, Benefits of personas   |       |
|          |   | 2.3       | Designing Behaviour, Five factors/preconditions for users to take actions, Models of behavior change  |       |
| 3        | Overview of Visual Design Principles, Processes, Wireframes & Prototyping | 3.1       | Visual Design Principles and Processes: Introducing visual design principles and processes, Basics of visual design, using lines, Using shapes, Types of shapes, Shape usage in visual design, Using colors, Textures, Forms, Design principles, Visual design tools. | 10L   |

|                       |  |     |   |           |
|-----------------------|--|-----|---|-----------|
|                       |  | 3.2 | Wireframes and Prototyping, what is a wireframe, how to create wireframes, Types of wireframes.<br><br>Wireframing tools: Sketch wireframes, Stencilling and paper cut-outs, Wireframing software, creating wireframes using graphic design software  |           |
|                       |  | 3.3 | What is prototyping, Prototyping methods, the process of creating prototypes, Prototyping tools   |           |
| 4                     | UI Design Implementation and Post Launching Activities | 4.1 | UI Design and Implementation, User interface design, UI design tools,<br>Creating the Design System in Sketch: Creating a structure for files and folders, Following the proper naming convention,  | 10L       |
|                       |  | 4.2 | Choosing the colors and creating the palettes, choosing fonts/typefaces, Creating and configuring the grid, Designing the UI components   |           |
|                       |  | 4.3 | Frontend UI Implementation and Process,<br>UI Design handover<br>Using a handover design tool: Handing-off UI design using Zeplin, handing over design using Sympli,<br>Frontend development/UI development, CSS layouts, CSS pre-processor's, CSS postprocessors, CSS methodologies, CSS frameworks. |           |
|                       |  | 4.4 | Post-launching UX Activities, Collecting the correct user feedback, User accessibility testing (UI testing), A/B testing,<br>Tracking and recording user UI sessions, Creating and analyzing conversion funnels,  |           |
| <b>TOTAL LECTURES</b> |  |     |   | <b>40</b> |

### **Course Outcomes:**

1. Understand basics of UI/ UX Design
2. Illustrate different types of User behaviour, persona & Design Behaviour.
3. Identify different aspects of Visual design, Principles, Processes , Wireframes & Prototyping.
4. UI Design and Implementation.
5. Understanding the UI Design Handover Process using tools.
6. Learning the Post- Launch UX Activities

| CASE STUDY |  |
|------------|--|
| 1          | <p>UX design of a simple mobile application on cooking, recipes and food shopping. The creative team wanted to step aside from the traditional recipe app where users just save the directory of the favorite meals, taken from the app database, or add their own recipes. We had a goal to create a bit more universal food app for users who love cooking. It includes the recipe database which is constantly updated. Also, the application has a supplies manager. To make UX more extended, it allowed users to find the recipes by the supplies they currently had at home or create a shopping list to buy ingredients that were missing. The app design included the comprehensive and diverse functionality which had to be presented to users in a simple and clear way. The designers had to analyze and prioritize all the points, as there was a high risk of overloading the screen. By research and testing, the user scenarios were created to determine which information about the meal in the recipe is found the most important. As the recipe app is aimed at daily basic operations and quite a diverse target audience, the user interface has to be super easy and accessible for users with different levels of tech-literacy and all types of mobile devices. The application layout is structured around intuitive navigation, high readability, light background, and eye-catching visuals. Clear and solid typography based on san-serif fonts makes the information scannable and legible on the screens of different sizes. Color contrast is used for amplifying quick navigation: bright color accents attract users' attention to interactive zones and active states of the layout elements. The search field is easily found on the top of the screen: its functionality is clarified for users with both text prompt and search icon.</p> |
| 2          | <p>One of India's most successful startups, Ola suffers from a common problem— clutter. An app used by millions on the daily provides so many options for customization that the user is often overwhelmed. Going back to the roots , Ola solves a fundamental problem — that of servicing taxi rides with the help of our smartphones. After talking to frequent users of the app spanning from different age groups (18–49), I inferred that users sometimes found booking cabs on Ola harder as compared to rival platforms — which I connected to some inconsistent flows. This combined with the constant call to actions (CTAs) and tiny text placement might've been the reason. As Indians, most of us like to compare the various ride types at a glance, knowing the</p>   |

price difference between a Mini and a Prime ride on a less-busy day can lead to a much more comfortable ride. For the more tech-savvy users, it was found that the app at many places, displayed the same type of information. A major example of this could be found in the ‘Know Your Ride’ section, which redirects the user to a ‘WebView’, whereas long-pressing the ride type also leads to a short description of the car specs and ‘Know More’ leads to the same ‘WebView’. But quite possibly, the biggest issue almost everyone complained about was the display of singular prices at the confirm ride screen. As Indians, most of us like to compare the various ride types at a glance, knowing the price difference between a Mini and a Prime ride on a less-busy day can lead to a much more comfortable ride. Identifying weaknesses, Inconsistent user flows, Too many options in Menu, Promos / CTAs (Call to action) densely populated across the experience, Laggy animations, Task

While observing the current situation, I realized that all of these weaknesses could be solved by simplifying the user flow for some basic actions and then adding secondary CTAs & promos on top of it.

| 2 | Understanding Component Lifecycle: | 2.1 | File System: Fs.read, File Writing a File, Writing a file asynchronously, Opening a file, Deleting a file, Other IO Operations, Node.js OS: what is OS, its methods with examples. Node.js Errors : Errors, types, examples.  | 10 |
|   |                                    | 2.2 | Node.js Timer : Set timer functions with examples, Clear timer functions with examples. Node.js DNS: What is DNS, its methods with examples. Node.js Net: What is socket programming, implements client -server application. Node.js Path : What is path, Node.js Path Methods, examples. Node.js StringDecoder: What is String Decoder, methods, examples. |    |
|   |                                    | 2.3 | Node.js Crypto : What is Hash, What is HMAC, Encryption Example using Hash and HMAC, Encryption example using Cipher, Decryption example using Decipher, Node.js TLS/SSL: What is TLS/SSL, What is public-key cryptography, Node.js TLS client example. Node.js Debugger: Syntax , example.   |    |
| 3 | Callbacks & Events                 | 3.1 | Node.js Process: Node.js Process Properties with examples, Node.js Process Functions with examples, Callbacks: Blocking Code Example, Non Block, Code Example Events : Event Driven Programming, Difference between Events and Callbacks, EventEmitter class, Returning event emitter, Inheriting events.   | 10 |
|   |                                    | 3.2 | Creating Web server: What is Web Server, Web Application Architecture, Creating Web Server using Node.js  |    |
| 4 | Node.js with Express               | 4.1 | What is Express.js?<br>Features and advantages of Express.js,   | 10 |

|                          |     |   |    |
|--------------------------|-----|---|----|
|                          |     | Installing Node.js with NPM<br>Creating Routes and Handling Requests  |    |
|                          | 4.2 | Handling different HTTP request methods (GET, POST, PUT, DELETE), Accessing route parameters and query parameters, Middleware in Express.js                             |    |
|                          | 4.3 | Creating a MongoDB database connection Node.js, Performing CRUD operations us database (Create, Read, Update, Delete),Query data using MongoDB, filters and projections |    |
| TOTAL NUMBER OF LECTURES |     |   | 40 |

### Course Outcomes:

1. Understand the fundamental concepts and architecture of Node.js.
2. Compare and contrast Node.js with other technologies such as AngularJS, Python, PHP, and Java.
3. Gain proficiency in working with Node.js basic commands, global objects, buffers, streams, file system operations, and the OS module.
4. Learn to write asynchronous code using callbacks and implement event-driven programming using EventEmitter.
5. Create web servers using Node.js and understand web application architecture.
6. Gain practical knowledge of integrating Node.js with databases like MySQL and MongoDB, including performing CRUD operations.

| 1          | <p>Developing Real-Time Chat-bots</p> <p>As you may be aware, real-time conversations are now commonly employed on almost every website on the internet, as you may have seen. To the point that they've practically become a must, particularly for commercial websites and digital items,</p> <p>The good news is that Node.js comes pre-loaded with essential features for developing</p> |

|   | <p>real-time chat applications. The Node.js Event API enables developers to create server-side events and push notifications, commonly used in real-time chat applications like Skype and Facebook Messenger.</p>  |
| 2 | <p><b>Developing Single-Page Applications</b></p> <p>Single-page apps have grown more popular in recent years. In SPAs, the whole program is virtually contained on a single page, allowing users to experience something similar to a desktop application.</p> <p>Node.js is an excellent choice for developing SPAs since it can effectively handle asynchronous calls and intensive I/O operations.</p> <p>Furthermore, Node.js is well-suited for data-driven single-page apps, in which the server serves as the back-end, transmitting data to the client, while the client-side handles all of the HTML renderings.</p> |
